The Status of Women in Texas, 2004: Highlights

This fact sheet was produced with support from the Dallas Women's Foundation.

Texas reflects both the advances and limited progress achieved by women in the United States. Women in Texas and the United States as a whole are seeing important changes in their lives and in their access to political, economic, and social rights. However, they by no means enjoy equality with men, and they still lack many of the legal guarantees that would allow them to achieve that equality. Women in Texas and the nation would benefit from stronger enforcement of equal opportunity laws, better political representation, adequate and affordable child care, and other policies that would help improve their status.

The rankings and grades for each of the composite indices in Chart 1 were calculated by combining data on several indicators of women's status in each of five areas. These data were used to compare women in Texas with women in each of the 50 states and the District of Columbia. In addition, they were used to evaluate women's status in Texas in comparison with women's ideal status, as reflected in the state's grades.

The advances women have made are not experienced equally by all women. Persistent inequalities evident in Chart 2 mean that many women of color experience disparities in their economic, political, social, and health status. Texas can improve the status of women of color by addressing ongoing racial and ethnic disparities in the state.
